

SafeCount Staff Detection Lanyards

Key features

- Exclude staff from the occupancy count
- Simple design that won't interfere with normal work
- Does not identify who individual staff members are

Product overview: SafeCount Staff Detection Lanyards

SafeCount sensors have built-in functionality to exclude staff from occupancy counting, leaving more room for customers inside the building. Staff members need to wear a simple lanyard for the sensors to identify them as employees and not add to the occupancy totals for an area. These lanyards are designed to be used by:

- Retail staff
- Security
- Door staff
- Cleaning crews

The lanyards are designed to keep the data collected by SafeCount sensors people-anonymous, so individual staff members will not be identifiable, even while wearing a Staff Detection Lanyard.

Please note: the lanyards must be worn on top of clothing to be detected by SafeCount sensors and stop the wearer from being added to the people counting totals.
